chef-client

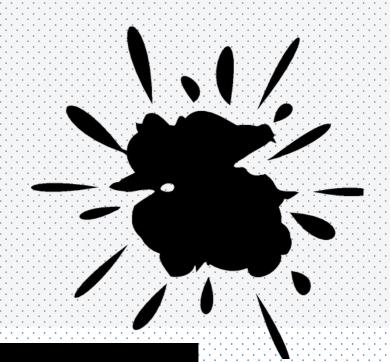

Author: Nho Luong
Skill: DevOps Engineer Lead

chef-client

\$ sudo chef-client --local-mode RECIPE_FILE

How would we apply both the workstation's setup recipe and apache's server recipe?

Author: Nho Luong

Objectives

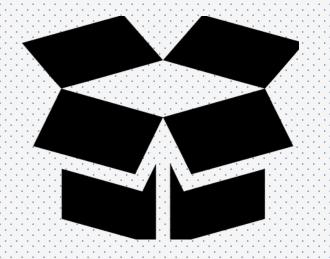

After completing this module, you should be able to use chef-client to:

>> Locally apply multiple cookbooks' recipes with chef-client.

Include a recipe from within another recipe.

Author: Nho Luong

--local-mode

chef-client's default mode attempts to contact a Chef Server and ask it for the recipes to run for the given node. We are overriding that behavior to have it work in a local mode.

Author: Nho Luong

In local mode, we need to provide a list of recipes to apply to the system. This is called a run list. A run list is an ordered collection of recipes to execute. Each recipe in the run list must be addressed with the format recipe[COOKBOOK::RECIPE].

Author: Nho Luong

Demo: Using 'chef-client' to Locally Apply Recipes

\$ sudo chef-client --local-mode –r "recipe[workstation::setup]"

Applying the following recipes locally:

The 'setup' recipe from the 'workstation' cookbook

Author: Nho Luong

Demo: Using 'chef-client' to Locally Apply Recipes

\$ sudo chef-client --local-mode -r "recipe[apache::server]"

Applying the following recipes locally:

The 'server' recipe from the 'apache' cookbook

Author: Nho Luong

Demo: Using 'chef-client' to Locally Apply Recipes

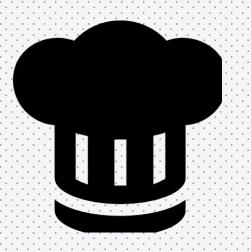

```
$ sudo chef-client --local-mode \
-r "recipe[workstation::setup],recipe[apache::server]"
```

Applying the following recipes locally:

- The 'setup' recipe from the 'workstation' cookbook
- The 'server' recipe from the 'apache' cookbook

Author: Nho Luong

Applying a Run List

Using a run list will allow us to specify things more 'logically' instead of with paths.

Objective:

- Individually apply the apache cookbook's server recipe and workstation cookbook's setup recipe
- Apply both the apache cookbook's server recipe and workstation cookbook's setup recipe
